

black is the hottest in fashion. Allow us to introduce the white speaker ... with a glint in our eye

black is back!

The giants of the industry have made black the hottest fashion in consumer electronics. SA prefers durable ideas, so we have opted to swim against the tide of this black fashion wave. Allow us to present our white speakers with the demure comment: white is right ...

The SA1550 floor speaker, SA510 compact centre speaker and the SE175 active subwoofer (not pictured here) are now available in a deliciously smooth white satin enamel finish. The white finish costs the same as our three different wooden finishes.

real wood for all the others

If you don't fancy white speakers, you can always try one of our three real-wood alternatives: maple, cherry and black ash.
