Instructions for RAM TWEAKS

How to install RAM TWEAKS in your Silverback speakers

RAM TWEAKS allow you to optimize and finetune your Silverback speakers using digital sound profiles installed directly into the speakers' DSP. It only takes a few minutes – and you can always revert to a previous version if you wish.

Installing RAM TWEAKS

Before you begin, you may want to watch this video guide:

Step-by-step:

1. **Download the RAM TWEAK file to your computer.**
2. **Copy the file to a USB stick**
    - The USB stick must be **FAT32-formatted**.
    - There must be **only one file** on the USB stick.
    - If you need help formatting to FAT32, watch this video: https://www.youtube.com/watch?v=Wg1aVe-PxT0
3. **Turn off the speaker**
    - Use the switch on the back of the speaker.
4. **Press and hold the Pairing button**
    - (The small button)
5. **Turn on the speaker while still holding the button**
    - Keep pressing until the light shows that the startup process has begun.
    - The LED will rotate slowly.
    - When you see this, you can release the Pairing button.
6. **Insert the USB stick into the speaker**
    - The LED will now begin to rotate quickly, indicating that installation is in progress.
7. **Turn off the speaker again**
    - When the light sequence is finished, turn off the speaker.
8. **Remove the USB stick**
    - The speaker is now updated with the selected RAM TWEAK.
